## 2<sup>nd</sup> Nordic Investment Managers Forum, Luxembourg

Nordic investment specialists united again

On October 6<sup>th</sup>, the Nordic Investment Managers Forum in Luxembourg is taking place again: For the second time, five leading asset managers from Scandinavia will come together to discuss important market trends and investment topics with professional investors. The forum is organized by Danske Invest, DNB Asset Management, East Capital, Origo and Sparinvest.

### Agenda in line with investor needs

The Scandinavian investment managers all stand for flat hierarchies, which allow investors direct access to portfolio managers and other decision-makers. They can thus expect an in-depth analysis of current investment topics, clear statements and an open exchange of opinions with the five fund managers from the leading Nordic asset management companies. The following topics are on the forum's agenda:

- **Global outlook: China's slowdown**  
Kim Asger Olsen, Managing Partner at Origo, will point to an interesting issue: How will central banks respond if China's slowdown influences the growth in the industrialized countries in a meaningful way.
- **Danish Mortgage Bonds: Safe haven and unique asset class**  
Stig Brammer, product specialist at Danske Invest, will explain the uniqueness of the Danish mortgage bonds and why they are used as a safe haven.
- **Global Technology Equities: Strong, stable earning in a matured sector**  
Anders Tandberg-Johansen, fund manager and head of global technology at DNB Asset Management, will analyze why the dominance of Tech-Giants on the stock market is justified.
- **Frontier Markets: Taking a wider view**  
Emre Akcakmak, fund manager Eastern Europe and global frontier markets at East Capital, will illustrate how he finds value beyond the established universe in markets like Rwanda or Cambodia.
- **Quantitative Investing: The long term focus**  
David Bakkegaard Karsbøl, fund manager at Sparinvest, will elaborate on how the factors of quantitative investing behave over time and how one might regard them as single investments that need to be diversified and strategically managed.
